MEANS NURSERY INC.

Cut Christmas Tree Tips

- Return to water as soon as possible after purchasing - within 6 hours to avoid a layer of sap buildup that inhibits uptake of water.
- Ideally make a fresh cut free from bruises, dirt, and sap before placing in the stand. Make the cut perpendicular not at an angle.
- Keep the trunk submerged in a reservoir stand for maximum freshness. Refill before it drops below trunk base.
- A tree will absorb as much as a gallon of water or more in the first 24 hours and one or more quarts each day after.
- Use a stand that fits your tree, do not whittle sides of trunk to fit.
- Keep away from major sources of heat. Lower temperatures slow the drying process and consumption of water.
