Sunlight

Partial to Full Sun.

Water

Keep soil moist but not water-logged, only watering when the top of the soil is dry. Ensure the pot has drainage holes and dump any excess water from saucers to prevent root rot. Yellowing leaves can be a sign of overwatering or soil pH too high.

Hardiness

Holly are diverse perennials generally well-suited to withstand our local climate; However, protect plant from harsh winter winds, especially in containers. When transitioning outdoors, especially in winter, gradually introduce the plant to colder temperatures to avoid shock.
